COWBOYS STADIUM

Work reaches the end zone

Nearly three years and \$1.15 billion later, team's new home gets ready to welcome fans, big events

Photography by TOM FOX/Staff Photographer

 **TOUR THE STADIUM** through the eyes of our award-winning photojournalist Tom Fox. dallasnews.com/cowboysstadium

ABOVE: Workers in 2007 prepared structural abutments for concrete. The abutments anchor the arches that support the retractable roof.

BELOW: A worker in February dragged mixed concrete being poured into a sidewalk form that circles the stadium's base.

ABOVE: Workers tied rebar to the 50-foot outside foundation wall in September 2006.

RIGHT: The north arch truss spanning the stadium is reflected in leftover rainwater.

ABOVE LEFT: Nearly 300 feet above the stadium's playing surface, Chris Villanueva paints under the south arch truss.

ABOVE RIGHT: By Good Friday 2008, the arch trusses were completed, and the roof was being put on.

RIGHT: Huge glass panes were put in underneath the stadium's roofline in 2008. The panes allow light in from the stadium's sides.

FAR RIGHT: A worker assembled a support piece for a cross truss on the floor of the stadium in March 2008.
